DETAILED ACTION

Election/Restrictions

Applicant's election without traverse of Group V, claims 22-31 in Paper No. 7 is acknowledged.

Claims 5-10, 16-21 and 32-39 are withdrawn from consideration.

Priority

Applicant has priority to 09/502600, filed 2/11/00.

Claim Rejections - 35 USC § 112

Claims 22-31 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

Applicant claims and discloses a method for vaccinating an individual against SCCE or fragments thereof and the individuals either have cancer or are suspected of getting cancer (page 22-23 of specification). Applicant also claims and discloses a method for producing immune-activated cells in an individual by administering SCCE or fragments thereof to individuals that either have cancer or are suspected of getting cancer. In support of applicant not provided any objective evidence to show that use of SCCE or fragments thereof can be used in individuals that either have cancer or are suspected of getting cancer to generate an immune response, much less a protective immune response. The field of cancer vaccines is highly unpredictable. Ezzell (J. NIH

Art Unit: 1642

Res. 1995 7:46) reviews the current thinking in cancer vaccines and states that tumor immunologists are reluctant to place bets on which cancer vaccine approach will prove effective in the long run (see the entire document, particularly the last paragraph) and further states that no one is very optimistic that a single peptide will trigger an immune response strong enough to eradicate tumors or even to prevent the later growth of micrometastases among patients whose tumors have been surgically removed or killed by radiation or chemotherapy (p. 48, para 6). In addition, Spitler (Cancer Biotherapy, 1995, 10:1-3) recognizes the lack of predictability of the nature of the art when she states that "Ask practicing oncologists what they think about cancer vaccines and you're likely to get the following response: "cancer vaccines don't work". As a venture capitalist of the director of product development at a large pharmaceutical company and you're likely to get the same response." (p. 1 para 1).

Thus, in view of the contemporary knowledge in the art of the general lack of successful applications of vaccines for the prevention of human diseases as discussed above, as well as the unpredictability in the art, as well as the lack of sufficient guidance in the specification, one of skill in the art would be forced into undue experimentation in order to use the invention as claimed.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sheela J Huff whose telephone number is 703-305-7866. The examiner can normally be reached on T,Th 6am-12pm and alternate Mondays 6am-3pm.

Application/Control Number: 09/905,083

Art Unit: 1642
